DETAILED ACTION

Election/Restrictions

1. Prior to setting forth the Restriction Requirement, it is pointed out that applicants have presented the instant claims 20-31 in improper format. The claims are improperly joined as the various groups indicated below appear to encompass distinct framework regions of SEQ ID NO: 10-18, 81-85, 28-36, 86-87, 45-52, 88-93, 59-64, 94-96, or DNA encoding framework regions consisting of SEQ ID NO: 10-18, 28-36, 81-87, 45-64, 99-96 to such an extent that they are considered separately patentable. A reference against one would not be a reference against the other. Therefore, the restriction will be set forth for each of the various groups, irrespectively of the improper format of the claims, because these are not proper species.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2, 3, 4 and claims 1, 5, 6, 7, in part, drawn to antibody comprising donor CDRs and framework regions from an Old World ape, classified in class 530, subclass 387.8. If Group I is elected, then claims 1, 5, 6, 7 will be examined to the extent that they read upon an antibody comprising Old World ape framework regions.
- II. Claims 8-13 and claims 1, 5, 6, 7 in part, drawn to an antibody comprising donor CDRs and framework regions from an Old World monkey, classified in class 530, subclass 387.3. If Group II is elected, then claims 1, 5, 6, 7 will be examined to the extent that they read upon an antibody comprising Old World monkey framework regions.

- III. Claims 14-16, drawn to a method of making an antibody comprising donor CDRs and framework regions from an Old World ape, classified in class 435, subclass 69.9.

Inventions (I, II) and Inventions (III and IV) are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the claimed antibody products can be made by a variety of methods including chemical synthesis, grafting CDRs onto frameworks, grafting framework regions onto the CDRs regions, etc so inventions (I and II) and Inventions (III and IV) are patentably distinct.

Inventions of Groups I, II and V-102 represent separate and distinct products which are made by materially different methods, and are used in materially different methods which have different modes of operation, different functions and different effects. The polynucleic acid of Groups 55-102, the framework regions of Groups 5-54, and the antibody of Group I and II are all structurally and chemically different from each

other. The polynucleotide is made by nucleic acid synthesis, while the polypeptide framework region is made by translation of mRNA, the antibody is raised by immunization, phage display, recombinant DNA technology or by other methods. Furthermore, the polynucleotide can be used for hybridization screening, the framework peptide can be used for CDR grafting methods, and the antibody can be used to immunopurify the polypeptide, for example. Each of the various amino acid sequences and nucleic acid sequences have different chemical structures which result in the need for a separate sequence database search for each sequence. The various framework regions are distinct for having different SEQ ID NO: numbers and for having been isolated from different species of animals and from different heavy or light chain regions. The examination of all groups would require different searches in the U.S. Patent shoes and the scientific literature and would require the consideration of different patentability issues. Thus the inventions I, II and V-102 are patentably distinct.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. This application contains claims directed to the following patentably distinct species of the claimed invention: If Group I or III is elected, then an election of species is necessary between the following different types of Old World monkeys

Species A: Pan troglodytes

Species B: Pan paniscus

Species C: Gorilla gorilla.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-3, 5-7 and 14-15 are generic.

Art Unit: 1642

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
